

Package: apportita (via r-universe)

July 8, 2024

Type Package

Title Utility for Handling 'magnitude' Word Embeddings

Version 0.0.5

Maintainer Akiru Kato <paithiov909@gmail.com>

Description A partial R port from 'magnitude', which is a fast, simple utility library for handling vector embeddings. The main goal of this package is to enable access to user's local magnitude data store.

--------------	-----------

calc_dist	<i>Calculate distances from keys to keys</i>
-----------	--

Description

Calculate distances from keys to keys

Usage

```
calc_dist(
  conn,
  keys,
  q,
  normalized = TRUE,
  method = c("euclidean", "chisquared", "kullback", "manhattan", "maximum", "canberra",
    "minkowski", "hamming"),
  ...
)
```

Arguments

conn	a Magnitude connection.
keys	character vector.
q	character vector.
normalized	logical; whether or not vector embeddings should be normalized?
method	string; method to compute distance.
...	other arguments are passed to proxyC::dist.

Value

a sparse Matrix of 'Matrix' package.

calc_simil	<i>Calculate similarities from keys to keys</i>
------------	---

Description

Calculate similarities from keys to keys

Usage

```
calc_simil(
  conn,
  keys,
  q,
  normalized = TRUE,
  method = c("cosine", "correlation", "jaccard", "ejaccard", "dice", "edice", "hamann",
    "simple matching", "faith"),
  ...
)
```

Arguments

conn	a Magnitude connection.
keys	character vector.
q	character vector.
normalized	logical; whether or not vector embeddings should be normalized?
method	string; method to compute similarity.
...	other arguments are passed to proxyC::simil.

Value

a sparse Matrix of 'Matrix' package.

calc_wrd	<i>Calculate Word Rotator's Distance from keys to keys</i>
----------	--

Description

Calculate Word Rotator's Distance from keys to keys

Usage

```
calc_wrd(conn, keys, q, normalized = TRUE, ...)
```

Arguments

conn	a Magnitude connection.
keys	character vector.
q	character vector.
normalized	logical; whether or not vector embeddings should be normalized?
...	other arguments are passed to <code>transport::wasserstein</code> internally.

Value

numeric scalar.

close,Magnitude-method *Close a Magnitude connection*

Description

Close a Magnitude connection

Usage

```
## S4 method for signature 'Magnitude'
close(con)
```

Arguments

con	a Magnitude connection.
-----	-------------------------

Value

the value from `RSQLite::dbDisconnect` is returned invisibly.

dim,Magnitude-method *Dimensions of a Magnitude table*

Description

Dimensions of a Magnitude table

Usage

```
## S4 method for signature 'Magnitude'
dim(x)
```

Arguments

x a Magnitude connection.

Value

a numeric vector.

doesnt_match	<i>Order keys by their distances to a key</i>
--------------	---

Description

Order keys by their distances to a key

Usage

```
doesnt_match(
  conn,
  key,
  q,
  n = 1L,
  normalized = TRUE,
  method = c("euclidean", "chisquared", "kullback", "manhattan", "maximum", "canberra",
    "minkowski", "hamming")
)
```

Arguments

conn a Magnitude connection.

key string.

q character vector. elements exact same with key will be dropped from result.

n integer.

normalized logical; whether or not vector embeddings should be normalized?

method string; method to compute distance.

Value

a tibble.

has_exact	<i>Check if keys exist in a Magnitude table?</i>
-----------	--

Description

Check if keys exist in a Magnitude table?

Usage

```
has_exact(conn, keys)
```

Arguments

conn	a Magnitude connection.
keys	a character vector.

Value

a tibble.

magnitude	<i>Create a Magnitude connection</i>
-----------	--------------------------------------

Description

Create a Magnitude connection

Usage

```
magnitude(path, ...)
```

Arguments

path	string; a path to a magnitude file.
...	other arguments are passed to <code>RSQLite::dbConnect</code> .

Value

a Magnitude connection object inheriting `RSQLiteConnection` class from 'RSQLite' package.

most_similar	<i>Order keys by their similarity to a key</i>
--------------	--

Description

Order keys by their similarity to a key

Usage

```
most_similar(
  conn,
  key,
  q,
  n = 1L,
  normalized = TRUE,
  method = c("cosine", "correlation", "jaccard", "ejaccard", "dice", "edice", "hamann",
            "simple matching", "faith")
)
```

Arguments

conn	a Magnitude connection.
key	string.
q	character vector. elements exact same with key will be dropped from result.
n	integer.
normalized	logical; whether or not vector embeddings should be normalized?
method	string; method to compute similarity.

Value

a tibble.

query	<i>Get vector embeddings of keys</i>
-------	--------------------------------------

Description

Get vector embeddings of keys. If out of vocabulary, their embeddings would be generated at random.

Usage

```
query(
  conn,
  q,
  normalized = TRUE,
  ngram_beg = NULL,
  ngram_end = NULL,
  topn = 5L
)
```

Arguments

conn	a Magnitude connection.
q	a character vector.
normalized	logical; whether or not vector embeddings should be normalized?
ngram_beg	integer. If supplied, the function gets out-of-vocabulary vectors by using character ngrams of which length are 'ngram_end - ngram_beg'.
ngram_end	integer.
topn	integer used for making out-of-vocabulary vectors.

Value

a tibble.

slice_frac	<i>Slice samples by fraction from a Magnitude table</i>
------------	---

Description

Slice samples by fraction from a Magnitude table

Usage

```
slice_frac(conn, frac = 0.001, normalized = TRUE)
```

Arguments

conn	a Magnitude connection.
frac	numeric.
normalized	logical; whether or not vector embeddings should be normalized?

Value

a tibble.

slice_index	<i>Slice samples by index from a Magnitude table</i>
-------------	--

Description

Slice samples by index from a Magnitude table

Usage

```
slice_index(conn, index, normalized = TRUE)
```

Arguments

conn	a Magnitude connection.
index	integer vector.
normalized	logical; whether or not vector embeddings should be normalized?

Value

a tibble.

slice_n	<i>Slice samples from a Magnitude table</i>
---------	---

Description

Slice samples from a Magnitude table

Usage

```
slice_n(conn, n, offset = 0, normalized = TRUE)
```

Arguments

conn	a Magnitude connection.
n	integer.
offset	integer.
normalized	logical; whether or not vector embeddings should be normalized?

Value

a tibble.

`wrđ`*Calculate Word Rotator's Distance*

Description

Calculate Word Rotator's Distance between two distributions.

Usage

```
wrđ(x, y, ...)
```

Arguments

<code>x</code>	a dense or sparse matrix.
<code>y</code>	a dense or sparse matrix.
<code>...</code>	other arguments are passed to <code>transport::wasserstein</code> interenally.

Details

Word Rotator's Distance is a measure of textual similarity improved of Word Mover's Distance.

Value

numeric scalar.
